

## **Beware of spreading sewage sludge**

What if land applications of sewage sludge was causing a nation health pandemic?

This is industrial, hospital, storm and household waste. A short list of contaminates and pathogens are listed in the 2009 Targeted National Survey of Sewage Sludge by the EPA. <http://water.epa.gov/scitech/wastetech/biosolids/tssss-overview.cfm>

Georgia:

Does anyone care that Jefferson County, Georgia has been turned into a sewer for good portion of Georgia's Municipalities? Why? Because the population of that county is mainly poor. No one is regulating what is happening Jefferson and Georgia EPA is turning their head allowing it.

This is happening all over our country.

Washington State:

Colorado:

Texas:

North Carolina:

Sewage sludge of any class is such a complex and unpredictable mixture of pathogens and chemical compounds that even if all the constituents were known, it would still be impossible to reliably assess the health risks when this toxic waste is land applied.
